302.3 (c) Complete plans shall be submitted in duplicate and with a third copy of the plot plan showing parking, landscaping and drainage; or such plans may be submitted in single copy where it is evident that Code interpretation is needed before final working drawings can be prepared.

(d) Plans for proposed construction, where such plans are not required to be prepared by and bear the impress seal of a licensed Architect or registered Professional Engineer, shall be submitted by the designer with the application as set forth in Subsection 302.1, hereinabove.

302.4 EXAMINATION OF PLANS:

(a) The Building Official shall examine all plans and amendments thereto.

(b) If the Building Official reasonably believes the plans conform to all pertinent laws the plans shall be marked "approved."

(c) If the Building Official reasonably believes that plans do not conform to all pertinent laws the plans shall be rejected and the plan examiner shall state the reasons for rejection in writing.

(d) Plans for which only minor correction is necessary may be corrected by notation on the prints with the approval of the designer.

(e) Plans for which major correction is necessary shall be revised on the tracings by the designer and new corrected prints submitted.

(f) Plans the Building Official reasonably believes have been corrected to satisfy his/her rejections and to comply with all pertinent laws shall be marked "approved."

(g) When plans are approved, such plans shall become a part of the application prepared by and submitted by the qualified applicant for permit as set forth in Paragraph 302.1 (b), hereinabove.

(h) Approval of the permit shall not be given until plans as set forth herein, are approved.

302.5 **PARTIAL APPROVAL:** Pending the completion of detailed drawings and checking of plans and specifications, the Building Official, at his discretion, and upon payment of the total required fee, may authorize the issuance of a temporary permit for site preparation, excavation and construction below grade provided such drawings and specifications are presented in such detail as to show the design, extent and scope of the project, but the holder of such temporary permit shall proceed only at his own risk and without the assurance that a permit for the superstructure will be granted.

FEDERAL EMERGENCY MANAGEMENT AGENCY
NATIONAL FLOOD INSURANCE PROGRAM
FLOODPROOFING CERTIFICATE
FOR NON-RESIDENTIAL STRUCTURES

O.M.B. No 3067-0077
Expires May 31, 1993

The floodproofing of non-residential buildings may be permitted as an alternative to elevating to or above the Base Flood Elevation; however, a floodproofing design certification is required. This form is to be used for that certification. Floodproofing of a residential building does not alter a community's floodplain management elevation requirements or effect the insurance rating unless the community has been issued an exception by FEMA to allow floodproofed residential basements. The permitting of a floodproofed residential basement requires a separate certification specifying that the design complies with the local floodplain management ordinance.

CITY	STATE ZIP CODE

SECTION I FLOOD INSURANCE RATE MAP (FIRM) INFORMATION

Provide the following from the proper FIRM:

COMMUNITY NUMBER	PANEL NUMBER	SUFFIX	DATE OF FIRM INDEX	FIRM ZONE	BASE FLOOD ELEVATION (in AO Zones, use depth)
------------------	--------------	--------	--------------------	-----------	--

SECTION II FLOODPROOFING INFORMATION (By a Registered Professional Engineer or Architect)

Floodproofing Design Elevation Information:

Building is floodproofed to an elevation of 7.0 feet NGVD. (Elevation datum used must be the same as that on the FIRM.)

Height of floodproofing on the building above the lowest adjacent grade is 4.0 feet.

(NOTE: for insurance rating purposes, the building's floodproofed design elevation must be at least one foot above the Base Flood Elevation to receive rating credit. If the building is floodproofed only to the Base Flood Elevation, then the building's insurance rating will result in a higher premium.)

SECTION III CERTIFICATION (By a Registered Professional Engineer or Architect)

Non-Residential Floodproofed Construction Certification:

I certify that based upon development and/or review of structural design, specifications, and plans for construction that the design and methods of construction are in accordance with accepted standards of practice for meeting the following provisions:

The structure, together with attendant utilities and sanitary facilities, is watertight to the floodproofed design elevation indicated above, with walls that are substantially impermeable to the passage of water.

All structural components are capable of resisting hydrostatic and hydrodynamic flood forces, including the effects of buoyancy, and anticipated debris impact forces.

I certify that the information on this certificate represents my best efforts to interpret the data available. I understand that any false statement may be punishable by fine or imprisonment under 18 U.S. Code, Section 1001.

 - A. The Geotechnical Report submitted by Wingert Laboratories shall be followed for all foundation piling, soil improvements, testing, as required, and procedures for work specifications.
 - B. The Geotechnical Engineer shall field check and approve all pile foundations and/or soil testing as required and the contractor shall not proceed without said approvals.
5. CONCRETE:
 - A. Poured-in-place concrete shall have at least the following strength after 28 days, unless noted otherwise:
 1. Slabs and miscellaneous concrete: 3000 psi
 2. All others: 4000 psi
 - B. Concrete tests shall be made and reports submitted as per Code.
 - C. All reinforcing bars shall be ASTM A615, Grade 60, U.N.C. welded wire fabric shall conform to ASTM A103. Welded wire fabric for slabs on grade and for walls shall have a minimum tensile yield strength of 60 ksi. Measured studs shall conform to ASTM A108 with 60 ksi minimum tensile strength and shall be automatically machine welded.
 - D. Concrete Protection for Reinforcement (U.N.C.):
 1. Concrete poured against earth: 3/4" minimum
 2. Concrete poured in forms but exposed to weather or earth: 1/2" minimum
 3. Columns, girders and beams: 1/2" minimum
 4. Slabs and walls not exposed to weather or earth: 3/4" minimum
 5. Slabs and walls exposed to weather or earth: 1/2" minimum
 6. Balcony slabs (exposed to weather or earth): 3/4" minimum
 - E. No splices of reinforcement shall be made and no welding to reinforcing shall be permitted except as detailed or authorized by the structural engineer. Lap splices, where permitted, shall be a minimum 36 bar diameters (U.N.C.) on the drawings. Wire fabric reinforcement must have one full mesh plus 2" at wide and end ground corners or provide corner bars of equal size and spacing.
 - F. Detail bars in accordance with the latest editions of ACI Detailing Manual and ACI Building Code Requirements for Reinforced Concrete.
 - G. Provide all accessories necessary to support reinforcing at positions shown on the drawings.
 - H. Place 2-#5 bars (1 ea. face) w/ 12" high projection around all openings in concrete slabs and walls, U.N.C.
 - I. Slabs on grade shall have wire mesh (6x6x1/4x1/4) w/ 4" w/ 4" spacing. Reinforcing and piling over 2" w/ 4" spacing. Solid slabs shall be placed over well compacted fill with density test made per code. For all other cases, the geotechnical report. Slab sections shall be placed in areas not exceeding 300 square feet and covered with 2" thick edges. Layers of material, 1/2" thick, shall be placed against adjacent walls, columns, and at smaller adjacent edges.
 - J. Provide 2-#5 bars (1 ea. face) w/ 12" high projection around all openings in concrete slabs and walls, U.N.C.
6. STEEL:
 - A. All structural steel shall conform to ASTM A36, except tube columns which shall conform to ASTM A500, Grade B, Fy=46 ksi.
 - B. Structural steel shall be detailed, fabricated and erected in accordance with the 8th Edition of the Manual of Steel Construction and AISC Code of Standard Practice.
 - C. All welding and welds shall meet the Structural Welding Code AWS/A5.1-88. All field welds shall be cleaned, inspected and approved. The precast concrete subcontractor shall provide a Florida P.E. certification that all welds meet code standards. All welders shall have evidence of passing the AWS standard qualification test.
 - D. Minimum weld size shall be 3/16" continuous fillet weld, unless noted otherwise on the drawings.
7. MASONRY:
 - A. All masonry block units shall conform to ASTM C90 standards with block classification (N-1) for 8" C.M.U.
 - B. Mortar strength types are as follows:
 1. TYPE M: 2500 psi
 2. TYPE S: 1800 psi
 3. TYPE N: 1500 psi
 - C. Wall types (masonry):
 1. Below grade foundation walls: (full bedded joints)
 2. Retaining walls: (full bedded joints)
 3. Exterior and load bearing walls: (full bedded joints)
 4. Parapet walls: (full bedded joints)
 - D. Wall reinforcing: (wall panels shall not exceed 200 sq ft)
 1. Horizontal joints: 2-#4 bars @ 16" o/c w/ 16" o/c
 2. Vertical joints: 2-#4 bars @ 16" o/c w/ 16" o/c
 3. Doweled Anchors: 16" o/c @ 16" o/c to match Dur-O-Wall
 4. Grouting: (all concrete columns & walls)
 5. Grouting: (top of walls to underside of concrete block tightly)
 - E. Linets shall be placed over all wall openings, not exceeding six feet, and can be 8" x 8" precast or poured in place with 2-#4 bottom reinforcement. Linets spanning greater than six feet must be approved by the Engineer.
 - F. Linets shall bear 8" at each end with the end cells filled. If a precast linet is used and the end cell requires a vertical bar, the adjacent cell shall also be filled and a vertical bar installed.
8. All dimensions on structural drawings shall be checked against architectural.
9. Engineer's approval must be secured for all substitutions.
10. Verify all openings through floor, roof and walls with mechanical and electrical contractor.
11. During erection of the building, the contractor shall be responsible for temporary bracing to withstand all loads to which the structure may be subjected, including (crane) loads, stockpiles of material and equipment. Such bracing shall be left in place as long as may be required for safety and until all structural framing and diaphragms are in place with connections completed.
